

Current Good Manufacturing Practices (cGMP) Training for Biotech

October 20, 2010 | Cambridge, MA

The FDA requires manufacturers (even those in clinical trials) to have their employees trained on the GMP regulations with re-training on a continuing basis so that each employee remains familiar with the GMP requirements.

Several FDA rule changes to these requirements went into effect in December 2008.

The goal of this course is to provide an introduction into the current Good Manufacturing Practices (cGMP) and to help companies and their employees **remain in compliance with FDA requirements**.
